

VIDEO REDACTION PLATFORM

BACKEND USER STORIES

1 — Authentication & User Management

Story 01 — User Registration

As a new user

I want to create an account

so that I can access the platform and manage my video projects.

Acceptance Criteria

- User can submit required details to create an account.
- System verifies mandatory fields.
- Successful registration returns confirmation.
- Duplicate accounts with same email are not allowed.

Technical Tasks

- Implement registration endpoint.
- Hash and store credentials.
- Validate email uniqueness.
- Create user entry in database.

Story 02 — User Login

As a registered user

I want to log in

so that I can access my dashboard and perform actions securely.

Acceptance Criteria

- User can log in with valid credentials.
- System rejects invalid or expired login attempts.
- User receives a valid session token on successful login.

Technical Tasks

- Implement login endpoint.
- Integrate OAuth provider or identity module.
- Generate and sign JWT tokens.
- Add token validation middleware.

Story 03 — Role-Based Access

As an admin

I want restricted features to be accessible only by authorized roles
so that the system remains secure and controlled.

Acceptance Criteria

- Admin-only actions are blocked for non-admin users.
- Unauthorized attempts return appropriate error messages.

Technical Tasks

- Add role validation in middleware.
- Map roles in user database and token claims.

2 — Project Management

Story 01 — Create Project

As a user

I want to create a project

so that I can organize my videos under it.

Acceptance Criteria

- User can create a project by providing basic details.
- System stores project name and metadata.
- User sees the newly created project in their list.

Technical Tasks

- Implement create project endpoint.
- Persist project data in DB.
- Associate project with the user's ID.

Story 02 — View Project List

As a user

I want to view all my projects

so that I can select one to work on.

Acceptance Criteria

- User can retrieve all projects they own.
- Projects display key information (name, created date).

Technical Tasks

- Fetch projects by user ID.
- Implement pagination/filtering for project list

Story 03 — Delete Project

As a user

I want to delete a project

so that I can remove unwanted data from my workspace.

Acceptance Criteria

- User can delete a project.
- Deleted projects do not appear in the user's list.

Technical Tasks

- Implement delete project endpoint.
- Soft-delete or archive associated metadata.

3 — Video Management

Story 01 — Upload Video

As a user

I want to upload a video

so that it can later be processed for redaction.

Acceptance Criteria

- User can upload a video file.
- System validates file requirements.
- Video appears in the associated project's list.
- User receives confirmation after successful upload.

Technical Tasks

- Implement file upload endpoint.
- Store video file in appropriate storage.
- Save video metadata in DB.

Story 02 — View Video Metadata

As a user

I want to view details of a video

so that I can understand its status and attributes.

Acceptance Criteria

- User can retrieve metadata such as filename, size, status.
- System returns consistent and accurate information.

Technical Tasks

- Implement metadata retrieval endpoint.
- Query video table for details

Story 03 — Delete Video

As a user

I want to delete a video

so that I can remove unwanted files from a project.

Acceptance Criteria

- User can delete a video they own.

- Deleted videos no longer appear in project listing.

Technical Tasks

- Implement delete endpoint.
- Mark video record as deleted.
- Start background cleanup workflow for physical files.

4 — Detection & Redaction Job Lifecycle

Story 01 — Request Detection

As a user

I want to request detection on my video
so that the system can find sensitive elements for redaction.

Acceptance Criteria

- User can select a video and request detection.
- System acknowledges the request.
- Job appears in the user's job/activity list.

Technical Tasks

- Save job entry in DB.
- Publish detection request message to the queue.
- Validate input parameters.

Story 02 — Store Detection Output

As a user

I want the detection results to be saved
so that I can review and adjust the redaction areas.

Acceptance Criteria

- Detection output is stored and linked to the video.
- User can retrieve detection details through UI.

Technical Tasks

- Create endpoint to receive worker callback.
- Store detection JSON in appropriate storage.
- Update job record to completed.

Story 03 — Request Final Redaction

As a user

I want to request generation of the final redacted video
so that I can download and use the processed output.

Acceptance Criteria

- User can submit a redaction request.

- System acknowledges the request.
- User can see job status updates.

Technical Tasks

- Save redaction job entry in DB.
- Publish redaction request message to queue.
- Store redaction configuration.

Story 04 — Cancel Job

As a user

I want to cancel a job

so that I can stop unnecessary processing.

Acceptance Criteria

- User can cancel pending or running jobs.
- System updates the job status accordingly.
- User receives cancellation confirmation.

Technical Tasks

- Implement cancel endpoint.
- Update job status to cancelling.
- Notify worker through message queue.

5 — Notifications

Story 01 — Receive Job Notifications

As a user

I want to receive notifications when jobs finish
so that I do not have to manually check status repeatedly.

Acceptance Criteria

- Notification created when job completes or fails.
- User can view unread notifications.
- User can mark notifications as read.

Technical Tasks

- Implement notification creation service.
- Build API to fetch unread notifications.
- Add push mechanism (SSE/WebSocket/Webhook).
